## OEM Services

Are you looking for economical, secure, transparent and audited eWaste recycling solutions? Do you want to ensure your products stay out of the grey marketplace? We can help. We already provide destruction services for numerous OEM clients and we understand your unique needs. We will work with you to develop a recycling system tailored to your operation.

eCycle Solutions has facilities in two provinces that are amongst the most advanced and cost effective eWaste recycling facilities in North America. Our process is modeled around the WEEE directive and we have EPSC certification.

Our status as an approved processor under Alberta's provincial recycling program translates into numerous benefits for you:

### **Security and confidence**

You can be assured that we have been audited by 3rd party government agencies to ensure environmental and security compliance. Additionally, we are in the process of obtaining our ISO 14001 and 9000 certifications.

We employ one of the most thorough OH&S programs in the industry.

Our operations are under 24/7 internet based camera surveillance. Our OEM clients are given a unique login account which allows them to view their equipment being recycled in real-time, no matter where they are in the world.

### **Significant cost savings**

Because we are an approved recycler in BC, Alberta and Saskatchewan, we may be able to process certain types of equipment ([view list here](#)) at no charge. In some cases we can even offer no charge shipping. Because we are government subsidized our services represent a significant cost savings for you.

**Contact us so we can begin developing a customized, secure recycling solution for you.**
