# Methodology

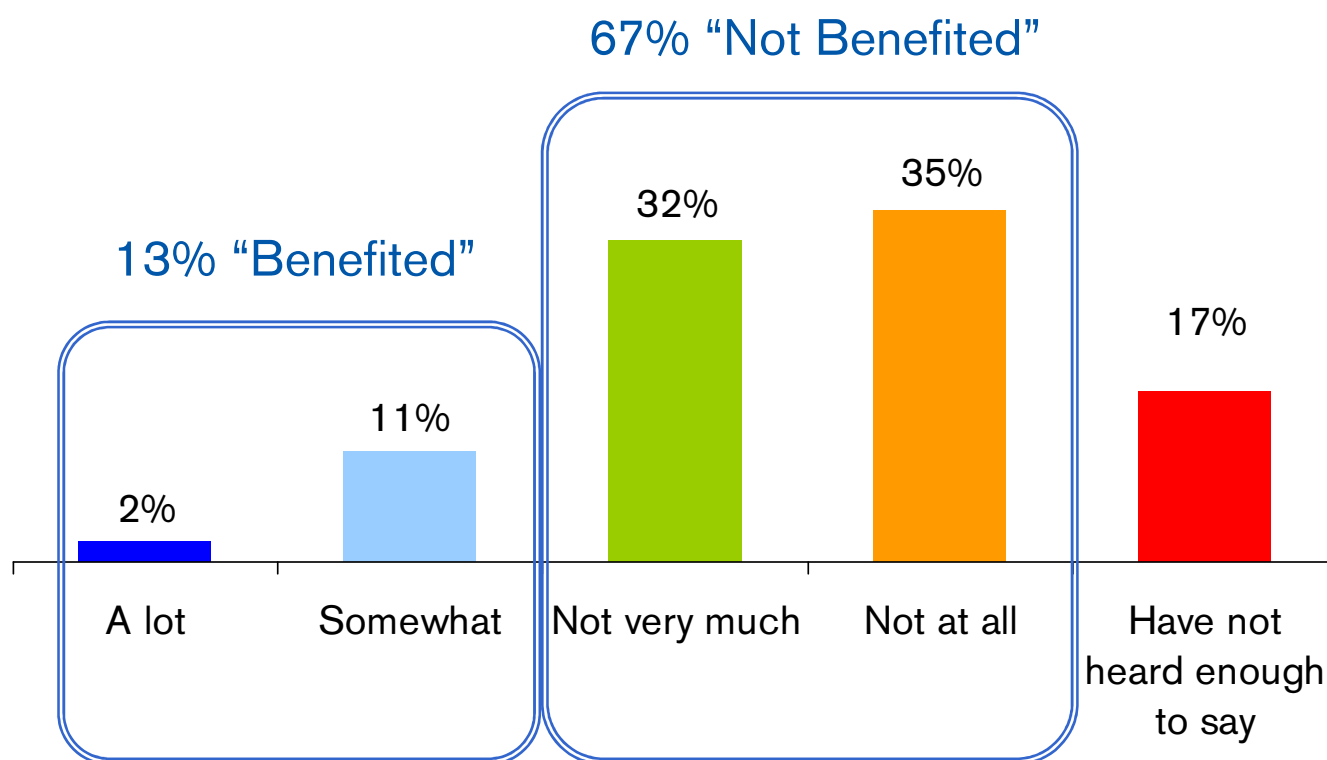

---

- Online survey conducted among 1445 Canadians adults 18 years-of-age and older , conducted from April 4<sup>th</sup> to April 11<sup>th</sup>, 2007.
- The margin of error will be larger within each sub-grouping of the sample.
- The sample used has been weighted according to 2001 Census data to accurately reflect region, gender and age. With a sample of this size the aggregated results are considered accurate to within  $\pm 2.58$  percentage points, 19 times out of 20, of what they would have been had a representative cross-section of Canadians.
- **Note:** Graphs may not always total 100% due to rounding values rather than an error in data.
- Sums are added before rounding numbers.
